

User Manual

STM32F2/4 Evaluation Board

Introduction

The STM32F417IGH6 evaluation board STM32F2/4-EVB is designed as complete development platform for STMicroelectronic's ARM Cortex-M3 core-based STM32F417IGH6 microcontroller with digital camera module interface, High speed USB OTG, Full speed USB OTG, Ethernet MAC, FSMC interface, two channels of CAN2.0A/B compliant interface,

2channels I2S, 3 channels I2C, 6 channels USART with smart card support, 3 channels SPI, SDIO, 3 ADC, 2 DAC, internal 128KB SRAM and 1MB Flash, JTAG&SWD debugging support. The full range of hardware features on the board is able to help you evaluate all peripherals (USB OTG HS, USB OTG FS, Ethernet, CAN, SD card, Smart card, USART, Audio DAC, RS232, PSRAM,NAND, MEMS, EEPROM... etc.) and develop your own applications. Extension headers make it possible to easily connect a daughter board or wrapping board for your specific application.

Features

- Four 5V power supply options: Power jack, USB FS connector, USB HS connector or daughter board.
- Boot from User Flash, System memory or SRAM.
- I2S Audio DAC, stereo audio jack.
- 1GByte or more SD card.
- Both type A&B Smart card support.
- I2C compatible serial interface 64KBit EEPROM, MEMS .
- RS232 communication.
- IrDA transceiver.
- USB OTG HS and FS with Micro-AB connector.
- IEEE-802.3-2002 compliant Ethernet connector.
- Camera module

- 4Mbit PSRAM
- 512Mbit NAND
- Two channels of CAN2.0A/B compliant connection.
- Inductor Motor Control connector.
- JTAG ,SW and Trace Debug support.
- 3.2" 240x400 TFT color LCD with touch screen.
- Joystick with 4-direction control and selector.
- Reset, Wakeup, Tamper and User button.
- 4 color LEDs.
- RTC with backup battery.
- Extension connector for daughter board or wrapping board.

1. Hardware Layout and configuration

The STM32F2/4-EVB evaluation board is designed around the STM32F417IGH6 in 176-pin UFBGA package. The hardware block diagram [Figure 2](#) illustrates the connection between STM32F417IGH6 and peripherals (Camera module, LCD, PSRAM, NAND, EEPROM, MEMS, USART, USB OTG HS, USB OTG FS, Ethernet, Audio, CAN bus, SD card) and [Figure 3](#) will help you locate these features on the actual evaluation board.

Figure 2: Hardware Block Diagram

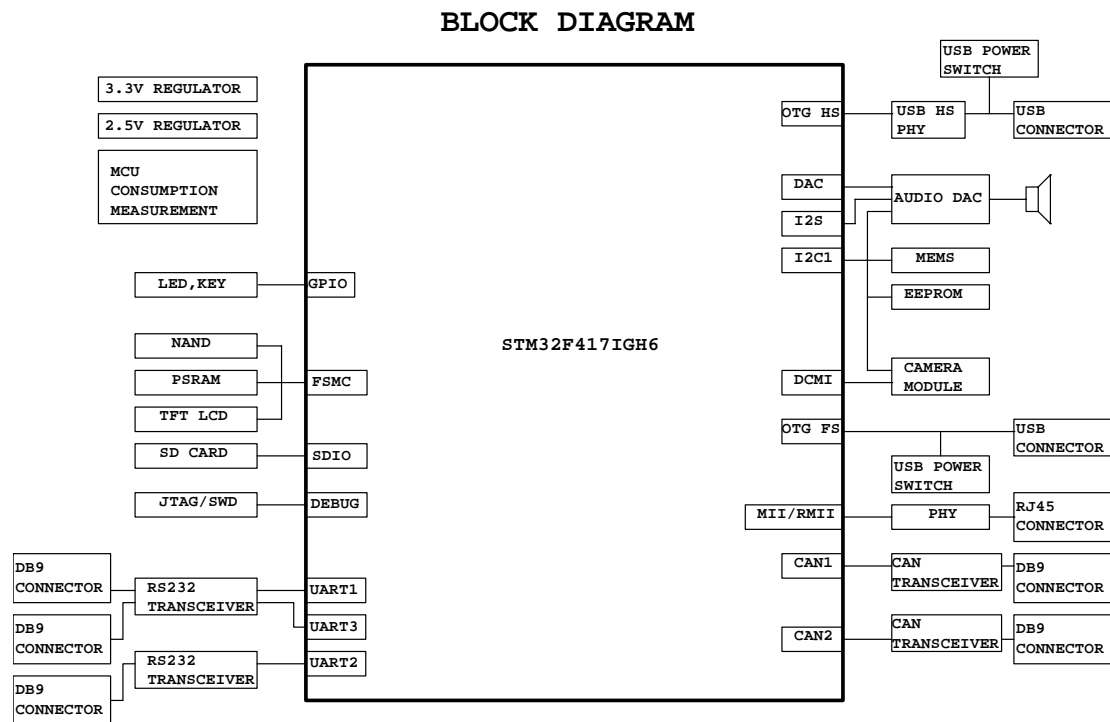

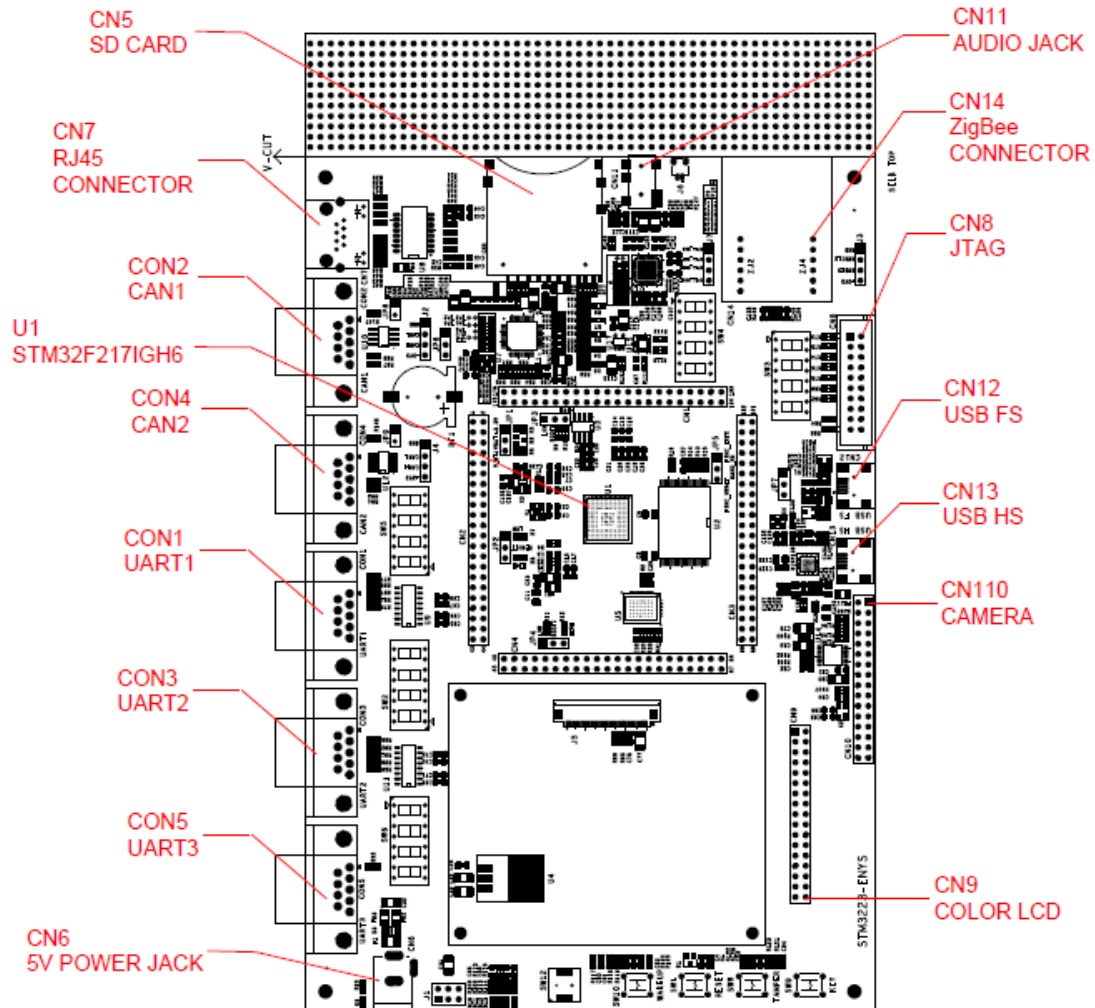

Figure 3: STM32F2/4-EVB Evaluation board layout

1.1 Power Supply

STM32F2/4-EVB evaluation board is designed to be powered by 5V DC power supply and to be protected by PolyZen from wrong power plug-in event. It's possible to configure the evaluation board to use any of following Four sources for the power supply.

- 5V DC power adapter connected to CN6, the Power Jack on the board (PSU on silk screen for Power Supply Unit).
- 5V DC power with 500mA limitation from CN12, the USB OTG FS Mini-B connector (FS on silkscreen).
- 5V DC power with 500mA limitation from CN13, the USB OTG HS Mini-B connector (HS on silkscreen).

The power supply is configured by setting the related jumpers **JP1,JP7** as described in [table 1](#).

Table 1 Power related Jumpers

JUMPER	Description
JP1	JP1 is used to select one of the four possible power supply resources. For power supply jack (CN6) to the STM32F2/4-EVB only, JP1 is set as shown to the right: (Default Setting) <div><div>PSU FS HS</div><div>J1</div></div>
	For power supply from USB OTG FS (CN12) to STM32F2/4-EVB only, JP1 is set as shown to the right: <div><div>PSU FS HS</div><div>J1</div></div>
	For power supply from USB OTG HS (CN13) to STM32F2/4-EVB only, JP1 is set as shown to the right: <div><div>PSU FS HS</div><div>J1</div></div>

JP7	Vbat is connected to battery when JP1 is set as shown to the right:	<div> <div>1 2 3</div>  </div>
	Vbat is connected to 3.3V power when JP1 is set as shown to the right: (Default setting)	<div> <div>1 2 3</div>  </div>

The LED D9 is lit when the STM32F2/4-EVB evaluation board is powered by the 5V correctly.

1.2 Boot Option

The STM32F2/4-EVB evaluation board is able to boot from:

- Embedded User Flash
- System memory with boot loader for ISP
- Embedded SRAM for debugging

The boot option is configured by setting switch SW1 (BOOT1) and SW2 (BOOT0).

Table 2 Boot related Switch

BOOT0	BOOT1	Boot from	JP3 BOOT0	JP4 BOOT1
0	X	STM32F2/4-EVB boot from User Flash when BOOT0 is set as shown to the right. BOOT1 is don't care in this configuration. (Default setting)	<div> <div>1 2 3</div>  </div>	<div> <div>1 2 3</div>  </div>
1	0	STM32F2/4-EVB boot from System Memory when BOOT0 and BOOT1 are set as shown to the right.	<div> <div>1 2 3</div>  </div>	<div> <div>1 2 3</div>  </div>
1	1	STM32F2/4-EVB boot from Embedded SRAM when BOOT0 and BOOT1 are set as shown to the right.	<div> <div>1 2 3</div>  </div>	<div> <div>1 2 3</div>  </div>

1.3 Clock Source

Four clock sources are available on STM32F2/4-EVB evaluation board for STM32F417IGH6 and RTC embedded.

- Y2, 25MHz Crystal for Ethernet PHY.
- Y3, 24MHz Crystal for USB OTG HS PHY.
- X1, 32KHz Crystal for embedded RTC.
- Y1, 25MHz Crystal with socket for STM32F417IGH6 Microcontroller, it can be removed when internal RC clock is used.

1.4 Reset Source

The reset signal of STM32F2/4-EVB evaluation board is low active and the reset sources include:

- Reset button SW1
- Debugging Tools from JTAG connector CN8.
- Daughter board from CN2

1.5 Audio

STM32F2/4-EVB evaluation board supports stereo audio play thanks to an audio DAC CS43L22 connected to both I2S2 port and one channels of DAC of microcontroller STM32F417IGH6. The CS43L22 can be configured via I2C1. The automatically switch between the speaker and headphone is supported by both CS43L22 and audio jack with plug detection pin.

1.6 EEPROM

A 64KBit EEPROM connected to I2C1 bus of STM32F417IGH6.

1.7 CAN

STM32F2/4-EVB evaluation board supports two channels of CAN2.0A/B complaint CAN bus communication based on 3.3V CAN transceiver. The two CAN bus are disabled and disconnected by jumpers from relevant STM32F417IGH6 IO's CAN2 is shared with USB OTG HS. The switch must be re-set to enable CAN2 as listed in [table 6](#) and [table 7](#).

Table 3 CAN1 related Jumpers

Jumper	Description
JP8	CAN1 terminal resistor is enabled when JP8 is fitted. Default setting: Not fitted

Table 4 CAN2 related Jumpers

Jumper	Description
JP9	CAN2 terminal resistor is enabled when JP9 is fitted. Default setting: Not fitted
SW5-7	CAN2_TX is connected to PB13 and USB OTG HS is disabled(SW5-8 OFF) Default setting: Not fitted
SW5-5	CAN2_RX is connected to PB5 and USB OTG HS is disabled(SW5-6 OFF) Default setting: Not fitted

1.8 RS232

RS232 communication is supported by D-type 9-pins RS232 connectors CON1(UART1) , CON3(UART2) , CON5(UART3) which are connected of STM32F417IGH6 on STM32F2/4-EVB evaluation board.

RS232 can be selected by setting of SW2,SW3,SW5:

Table 5 RS232 Related Switch

UART1: (shared with USB FS)

Switch_ ON	Description
SW3-1	UART1_TX is connected to PA9 and USB OTG FS is disabled(SW3-2 OFF) Default setting: Not fitted
SW3-3	UART1_RX is connected to PA10 and USB OTG FS is disabled(SW3-4 OFF) Default setting: Not fitted

UART2:(shared with USB HS & ETHERNET)

Switch_ ON	Description
SW2-1	UART2_CTS is connected to PA0 and WAKE is disabled(SW2-2 OFF) Default setting: Not fitted
SW2-3	UART2_RTS is connected to PA1 and ETHERNET is disabled(SW2-4 OFF) Default setting: Not fitted
SW2-5	UART2_TX is connected to PA2 and ETHERNET is disabled(SW2-6 OFF) Default setting: Not fitted
SW2-7	UART2_RX is connected to PA3 and USB OTG HS is disabled(SW2-8 OFF) Default setting: Not fitted

UART3:(shared with USB HS)

Switch_ ON	Description
SW5-1	UART3_TX is connected to PB10 and USB OTG HS is disabled(SW5-2 OFF) Default setting: Not fitted
SW5-3	UART3_RX is connected to PB11 and USB OTG HS is disabled(SW5-4 OFF) Default setting: Not fitted

1.9 MicroSD card

The 1GByte or more MicroSD card connected to SDIO of STM32F417IFT6 is available on the board. MicroSD card Detection is managed by standard IO port PF11.

1.10 MEMS

A ST MEMS device LIS3DH is connected to I2C1 bus of STM32F417IGH6 on the board.

1.11 USB OTG FS

STM32F2/4-EVB evaluation board support USB OTG full speed communication via a USB MINI-B connector (CN12) and USB power switch (JP7) connected to VBUS. The evaluation board can be powered by this USB connection at 5V DC with 500mA current limitation.

1.12 Ethernet

STM32F2/4-EVB evaluation board support 10M/100M Ethernet communication by a PHY IP101A (U7) and integrated RJ45 connector (CN7). Both MII and RMII interface mode are supported and can be selected by setting of Jumper JP6 and Switch SW2 as listed below:

Table 6 Ethernet Related Jumpers

Jumper	Description
JP6	25MHz clock is provided by external crystal X1 (for MII interface mode only) when JP6 is set as shown to the right: 
	25MHz clock for MII or 50MHz clock for RMII is provided by MCO when JP6 is set as shown to the right (Default setting): 

Table 7 Ethernet Related Switch(shared with UART2)

Switch_ ON	Description
SW2-4	ETH_RX_CLK is connected to PA1 and USART2_RTS is disabled(SW2-3 OFF) Default setting: fitted
SW2-6	ETH_MDIO is connected to PA2 and USART2_TX is disabled(SW2-5 OFF) Default setting: fitted

1.13 USB OTG HS

STM32F2/4-EVB evaluation board support USB OTG High speed communication via a USB Mini-B connector (CN13), USB High speed PHY (U19) and USB power switch (U18) connected to VBUS. The evaluation board can be powered by this USB connector (CN13) at 5V DC with 500mA current limitation.

The USB ULPI bus is shared with UART2, MEMS, SPI1, UART3, CAN2, the SW2~SW5 must be setting for USB OTG HS.

Table 8 Ethernet Related Switch(shared with UART2, MEMS, SPI1, UART3, CAN2)

Switch_ON	Description
SW2-8	ULPI_D0 is connected to PA3 and USART2_RX is disabled(SW2-7 OFF) Default setting: fitted
SW3-6	ULPI_D1 is connected to PB0 and MEMS_INT1 is disabled(SW3-5 OFF) Default setting: fitted
SW3-8	ULPI_D2 is connected to PB1 and MEMS_INT2 is disabled(SW3-7 OFF) Default setting: fitted
SW4-8	ULPI_D7 is connected to PB5 and SPI1_MOSI is disabled(SW4-7 OFF) Default setting: fitted
SW5-2	ULPI_D3 is connected to PB10 and USART3_TX is disabled(SW5-1 OFF) Default setting: fitted
SW5-4	ULPI_D4 is connected to PB11 and USART3_RX is disabled(SW5-3 OFF) Default setting: fitted
SW5-6	ULPI_D5 is connected to PB12 and CAN2_RX is disabled(SW5-5 OFF) Default setting: fitted
SW5-8	ULPI_D6 is connected to PB13 and CAN2_TX is disabled(SW5-7 OFF) Default setting: fitted

1.14 Camera Module

Camera module is connected to DCMI bus of STM32F417IGH6.

1.15 PSRAM and NAND

The 4Mbit PSRAM and 512Mbit NAND are connected to FSMC bus of STM32F417IGH6.

1.16 Development and Debug support

The two debug connectors available on STM32F2/4-EVB evaluation board are:

1. CN8, standard 20-pins JTAG interface connector that is compliant with debug tools of ARM7 and ARM9.

1.17 Display and Input devices

The 3.2" TFT color LCD connected to FSMC bus and 4 general purpose color LED's (D10,11,12,13) are available as display device. A touch screen connected to TSC2007, direction joystick with selection key, general purpose button (SW9), Wakeup button (SW10) and Tamper detection button (SW8) are available as input devices.

Table 9 LCD modules(TFT LCD with touch screen (CN9))

Pin on CN16	Pin name	Pin connection	Pin on CN16	Pin name	Pin connection

2. Connector

2.1 Daughter board extension connector CN1,2,3 and CN4

Four male headers CN1,2,3 and CN4 can be used to connect with daughter board or standard wrapping board to STM32F2/4-EVB evaluation board. All total 140 GPI/Os are available on it.

Table 10 Daughter board extension connector CN2

3,5,6	GND

2.7 Audio connector CN11

A 3.5mm Stereo audio jack CN11 with plug-detection feature connected to audio DAC is available on STM32F2/4-EVB board.

2.8 JTAG debugging connector CN8

Figure 9 JTAG debugging connector CN8

Table 16 JTAG debugging connector CN8

Pin number	Description	Pin number	Description
1	3.3V power	2	3.3V power
3	JTRST/PB4	4	GND
5	JTDI/PA15	6	GND

5	GND		

2.12 Power connector CN6

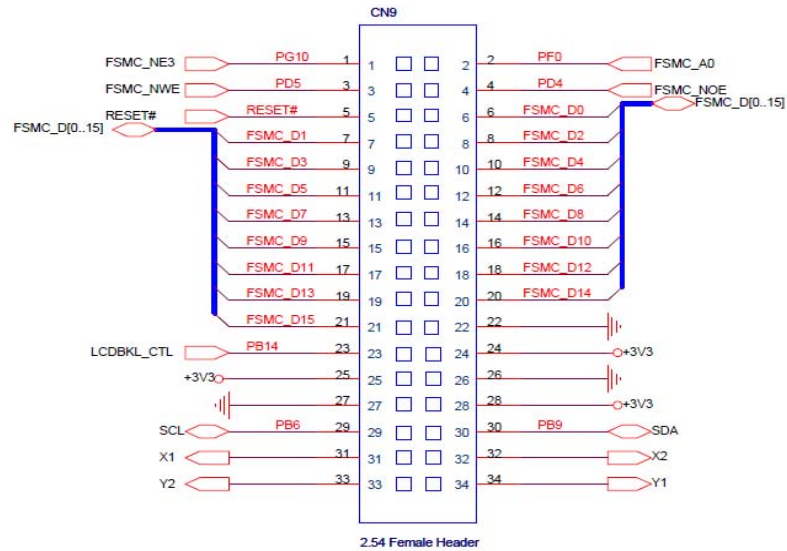

Your STM32F2/4-EVB evaluation board can be powered from a DC 5V power supply via the external power supply jack (CN6) shown in [Figure13](#). The central pin of CN6 must be positive.

Figure 13 Power supply connector CN6

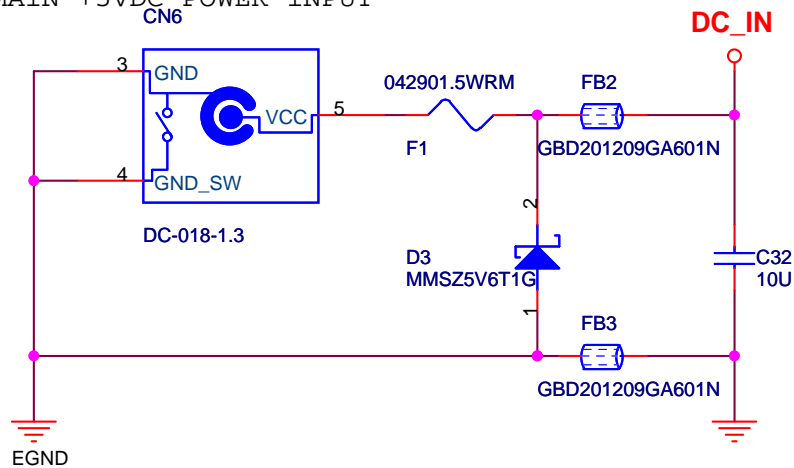

2.13 TFT LCD connector CN9

One 34-pin male header CN19 is available on the board to connect LCD module board MB785. Please refer to [chapter 1.17](#) for detail.

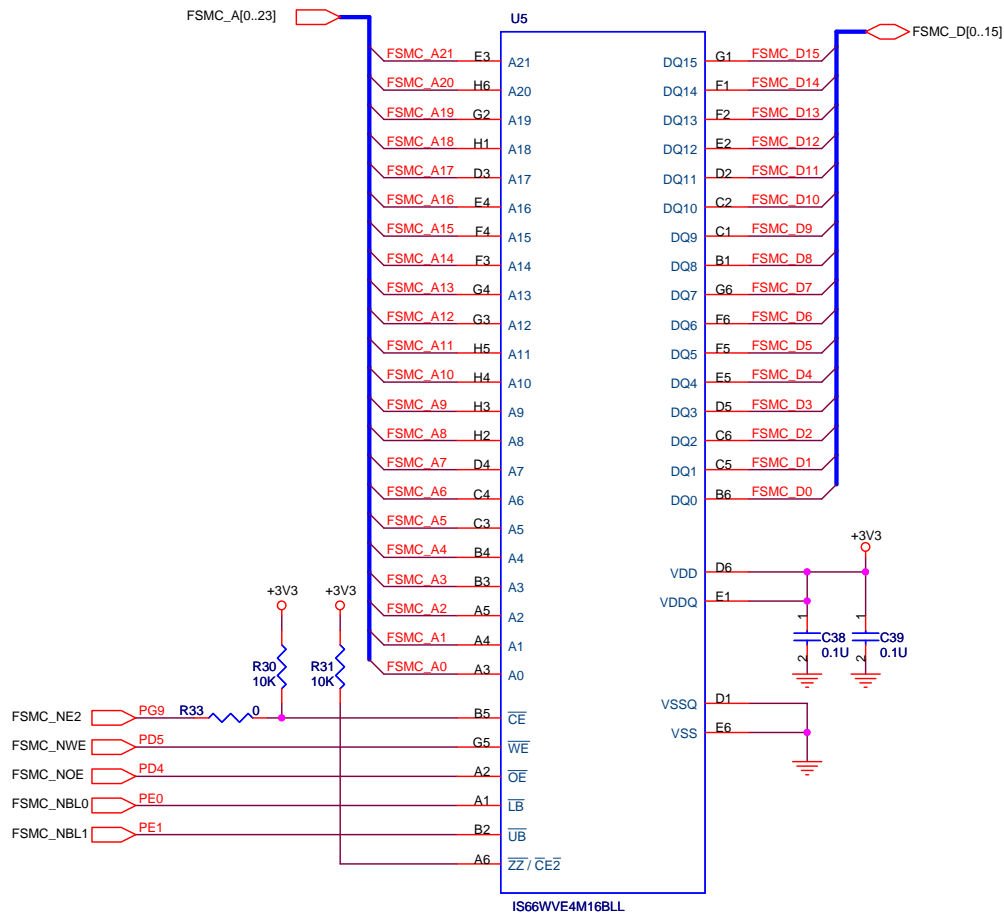

Pin number	Description	Pin number	Description
